Instructions after PRK – UVA treatment.

1) **Exocin (antibiotic)**:
   One drop x 4 times a day in the treated eye for **one week**

2) **Maxidex (cortizone)**:
   One drop x 4 times a day in the treated eye for one month and then one drop x 2 times a day in the treated eye for one month (total 2 months)

3) **Vitamin C (1000mg)**: One pill per day for 2 months.

**Attention:**
- Shake the bottle of the drops very well prior to their use.
- Put 1-2 drops from each medication in the treated eye x 4 times a day for the exact days mentioned above.
- Before using the second medication, you have to wait approximately 5 minutes.

**Artificial tears**
You can use artificial tear on your own will in case you feel your eyes very dry. (Artificial tears help to moisten your eyes and to make the vision more comfortable).

**In case of severe pain the first 1-3 days** you can use one pill of Lonarid N every 4-6 hours.

**How to use the drops:**
1. Lean you head backwards.
2. Open your eyes as wide as possible without pulling or touching the lids.
3. Squeeze the bottle so one drop gets into the eye. Pay attention so the tip of the bottle NOT to touch the eye.
4. Close your eyes for a few seconds.
5. In case you need to use more than one drop, you have to wait few minutes before installing the next drop.
